

## 6931 / 693110 CARNIZOO

### COMPLEMENTARY FEED FOR CARNIVORE BIRDS OF PREY AND REPTILES

Feed supplement for meat-eating birds of prey and reptiles. The recommended dose is 10 g per kg of prey. Mix Carnizoo through the daily diet. In this way, the animal gets the right amount of minerals, trace elements and vitamins it needs for its everyday activities and good health. The small dosage spoon contains 5 g of Carnizoo; the large one 30 g.

Carnizoo contains omega-3-fatty acids. These fatty acids are derived from fish oil that can contribute towards maintaining the animal's health and in young animals can have a positive effect on their ability to learn and to be trained. Sea algae chalk is an important source of the minerals calcium and magnesium. This type of mineral makes it very easy to absorb calcium and contributes towards an uninterrupted digestion of the diet and to bone mineralization. It ensures bones remain light but strong with many cross connections in their internal structure.

Recommended dose: 1% of the daily diet for birds of prey and meat-eating animals.
