

AKWAVIT SHARK LIQUID

Product code: 691601

Feed supplement specially developed for elasmobranch fish-types such as sharks and rays. It contains a balanced level of vitamins and minerals. Akwavit Shark contains high amounts of iodine and vitamin C as well as chalk weed: a natural source of minerals that ensures the presence of an easily absorbable form of calcium. Akwavit Shark contains only limited amounts of vitamin A as well as beta-carotin in the form of pro-vitamin A. Beta-carotin is transformed into vitamin A as the animal requires.

The tablets have a dividing line, making it easy to provide a half dose.

Complementary feed for sharks and rays. Akwavit Shark Liquid contains essentials vitamins and trace elements for shark and rays.

Directions for use:

Feed the animals by injecting the liquid into the feed fish.

Feed 3 times per week Akwavit Shark Liquid.
